

OPPORTUNITIES

Profile

DST Consulting Engineers Inc. is a growing company that provides professional expertise on environmental, energy and waste issues related to the design, construction and building management industries. Our priority is to reach architects, engineers, interior designers, contractors, building owners and managers and government, to improve the environmental performance and cost effectiveness of your operations.

Our qualified team has the skills to help you better respond to your clients' needs, demonstrate a commitment to sustainable development and ensure regulatory compliance. The benefits to you are practical and profitable results.

Industry Trends

Growing environmental awareness, changes to our regulatory structure and the need to lower costs are making the inclusions of environmental considerations an integral part of business. Adjusting to the changing face of business is becoming more of a challenge with each passing day.

Leading Canadian companies and government departments are recognizing the need to position themselves to respond to the need for environmental responsibility by demonstrating best practices within all aspects of their operations.

"We hope that the seeds have been sown with our service providers to include the sustainable design philosophy in all aspects of service delivery, be it in planning, design, construction, repairs or maintenance". Canada Post Real Estate Group, on the Sustainable Design and Construction Guide.

Value Added Services

DST Consulting Engineers Inc. is at the forefront of environmental innovations, providing a wide range of environmental management and design services to strengthen your environmental performance and lower your costs. Our commitment to flexibility, innovation, effective communication, and an overall environmental management systems approach will ensure that your job gets done right!
